

4. (original) The method of claim 1, wherein the ornamental design is printed in color.

5. (original) The method of claim 1, wherein the ornamental design is a printing of bit map, said bit map not including a logo, shipment, or courier information.

6. (original) The method of claim 1, wherein the ornamental design is a first design and said first design includes a second design.

7. (original) The method of claim 1, further including the step of controlling addition of the design to the shipping label at an ordering system computer.

8. (original) The method of claim 1, further including the step of controlling addition of the design to the shipping label at an ordering center system computer.

9. (original) The method of claim 1, further including the step of controlling addition of the design to the shipping label at a financial institution system computer.

10. (original) The method of claim 1, further including the step of controlling addition of the design to the shipping label at a distribution center system.

11. (currently amended) A method for generating an ornamental design on a sheet including a member from a group consisting of a courier shipping label, a greeting card, and a packing list, the member printed at a shipper printer device in connection with a particular shipment, the method including the steps of:

assigning shipping information signals corresponding to a waybill for a particular shipment with a courier computer;

~~assigning digital electrical signals corresponding to a member of the group for a particular shipment;~~

controlling addition of an ornamental design on a sheet conveyed with the shipment, the sheet including a member of the group including the waybill, a greeting card, a packing list, and a combination thereof;

transmitting the digital electrical signals corresponding to the ~~member of the group for the particular shipment to~~ waybill and signals corresponding to the ornamental design a shipper printer device;

~~combining the digital electrical signals corresponding to the member of the group for the particular shipment with signals corresponding to an ornamental design; and~~

printing the waybill along with the ornamental design on the member of the group with the shipper printer device; and, ~~including the ornamental design, for~~

shipping the member of the group with the ornamental design, along with the particular shipment, in accordance with the waybill ~~at the shipper printer device.~~

12. (original) The method of claim 11, wherein the ornamental design includes a heart.

13. (original) The method of claim 11, wherein the ornamental design includes a wreath.

14. (original) The method of claim 11, wherein the ornamental design is printed in color.

15. (original) The method of claim 11, wherein the ornamental design is a printing of bit map, said bit map not including a logo, shipment, or courier information.

16. (original) The method of claim 11, wherein the ornamental design is a first design and said first design includes a second design.

17. (original) The method of claim 11, further including the step of controlling addition of the design at an ordering system computer.

18. (original) The method of claim 11, further including the step of controlling addition of the design at an ordering center system computer.

19. (original) The method of claim 11, further including the step of controlling addition of the design at a financial institution system computer.

20. (original) The method of claim 11, further including the step of controlling addition of the design at a distribution center system.

21. (currently amended) A method for generating a waybill ~~an ornamental design on a sheet including a member from a group consisting of a courier shipping waybill label, a greeting card, and a packing list, the member printed at a shipper printer device in connection with a particular shipment including at least two members of the group,~~ the method including the steps of:

assigning shipping information signals corresponding to a waybill for a particular shipment with a courier computer;

~~assigning digital electrical signals corresponding to a member of the group for a particular shipment;~~

controlling addition of an ornamental design on a sheet conveyed with the shipment, the sheet including a member of the group including the waybill, a greeting card, a packing list, and a combination thereof;

transmitting the digital electrical signals corresponding to the ~~member of the group for the particular shipment to~~ waybill and signals corresponding to the ornamental design to a shipper printer device;

~~combining the digital electrical signals corresponding to the member of the group for the particular shipment with signals corresponding to an ornamental design; and~~

Ar printing the waybill and printing the ornamental design on the member of the group, ~~including the ornamental design, for the particular shipment at the shipper printer device;~~ and

shipping more than one member of the group, along with the shipment, in accordance with the waybill.

22. (original) The method of claim 21, wherein said at least two members are printed on the same sheet.

23. (original) The method of claim 21, wherein all said members are printed on the same sheet.

24. (original) The method of claim 20, further including the steps of:
combining ornamental design signals with signals for printing another member of the group; and

printing the member of the group, including the ornamental design, for the particular shipment at the shipper printer device.

25. (original) A method for using a digital electrical computer apparatus located at an order center for shipping a product from a remotely located distribution center, the method including the steps of:

producing output electrical signals representing a packing list for an order of a product by causing an order center apparatus located at an order center to change input digital electrical signals into the output digital electrical signals, the order center apparatus including a digital electrical computer having a processor, the processor electrically connected to a memory device for storing and retrieving machine-readable signals in the memory device, to an input device for receiving input data and converting the input data into the input electrical signals, and to an output device for receiving the output electrical signals, and wherein the processor is controlled by a computer program to implement the step of producing;

assigning shipping information signals to the order with a digital electrical computer shipping apparatus;

linking, by digital communication, the signals representing the packing list with the shipping information signals;

transmitting the signals representing the packing list to, and receiving the signals representing the packing list at, a printer device at a distribution center located remotely from the order center;

printing the packing list at the printer device at the distribution center; and

shipping the product specified by the packing list, in accordance with the shipping information signals, from the distribution center.

entering more of the input data at the input device to produce more of the output electrical signals representing a customized message received from an ordering system for

communication to a recipient of the product;

the step of linking includes linking, by digital communication, the signals representing packing list with the signals representing the customized element;

the step of transmitting includes transmitting the signals representing the customized element, along with the shipping information signals, to the printer device at the distribution center;

the step of printing includes printing the customized graphical element, along with the packing list and a shipping label, at the printing device at the distribution center; and

the step of shipping is carried out by shipping the customized graphical element, along with the product, from the distribution center.

26. (original) The method of claim 25, wherein the step of printing includes printing the message and the graphical element on a greeting card.

27. (original) The method of claim 25, wherein the step of printing is carried out by locating a sheet in the printer, the sheet including a greeting card for the message and having preprinted artwork and demarcations for detaching the greeting card from the packing list and the shipping label; and wherein the step of shipping includes separating the packaging list, the shipping information, and the greeting card by tearing the sheet at the demarcations.
